SUMMARY

GenAI / LLM Engineer (B.Tech, Artificial Intelligence & Data Science) with hands-on experience in **Python, LLMs, Retrieval-Augmented Generation (RAG), APIs, and FastAPI**. Combines GenAI skills with a solid data foundation: SQL, ETL pipelines, data cleaning, and validation on 500K+ records, which matters when building retrieval pipelines that depend on clean, well-structured data. Experienced in ML fundamentals and feature engineering, and in delivering insights to non-technical stakeholders.

EXPERIENCE

GenAI / LLM Engineer Intern — Decode Data Academy July 2025 – Present

- Cleaned, standardized, and structured 10,000+ records across 5+ branches and 2 colleges with **SQL/MySQL pipelines**, eliminating 95%+ of data errors, the kind of clean, well-structured data that retrieval and LLM applications depend on.
- Designed a normalized relational schema and 10–15 SQL views so data is easy to query and consume by downstream applications.
- Automated repeatable ingestion and transformation workflows with a **Pentaho Spoon** ETL layer, improving processing efficiency by 20–30%.
- Implemented validation and business-rule checks across 1,000+ records to catch inconsistent or malformed entries before downstream use.
- Translated requirements from a 6-member analytics team into usable outputs, presenting insights through 6 Power BI dashboards to non-technical users.

PROJECTS

Insurance Incentive Optimization ([GitHub](#), [Live](#)) Python, FastAPI, Scikit-learn

- Built and deployed an end-to-end ML service that predicts **policy renewal probability** on 67,875 records and recommends a revenue-maximizing agent incentive per policy.
- Designed a **FastAPI /predict** REST endpoint (Pydantic validation, CORS, batch JSON input/output) on Render, consumed by a live frontend on Vercel, the same API pattern used to serve LLM/RAG backends.
- Built a scikit-learn Pipeline (imputation, one-hot/target encoding, scaling, engineered features) and persisted it with joblib/pickle for low-latency inference.

- Built an end-to-end **ML pipeline** on a 55K-row, 122-column loan dataset: missing-value and outlier handling, encoding, and model-ready data preparation.
- Engineered **10+ predictive features** (income segmentation, credit ratio, EMI burden, employment duration) to improve customer risk profiling.
- Trained and compared **Logistic Regression, Decision Tree, and Gradient Boosting** classifiers to predict loan default risk; evaluated with standard classification metrics.

- Built an end-to-end **data pipeline** (Pentaho Spoon, MySQL) processing 445K+ flight records into an analytics-ready fact table (455K rows → 6.5K, ~98% reduction), the kind of feature-ready data layer ML workloads depend on.
- Modeled star-schema tables and SQL views feeding 4 Power BI dashboards on airline delays, airport performance, and carrier efficiency.

EDUCATION

- 2022 - 2026
- Bachelor of Technology (Artificial Intelligence and Data Science) at **Lakshmi Narain College of Technology, Bhopal, Madhya Pradesh, India**
- 2020 - 2021
- Higher Secondary Education (Class XII) at **Manikala Nahar Higher Secondary School**
- 2018 - 2019
- Secondary Education (Class X) at **Shri Maniklal Nahar International School**

TECHNICAL SKILLS

Programming:	Python, SQL
GenAI & LLMs:	Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Generative AI
APIs & Backend:	FastAPI, REST APIs, API Integration
Machine Learning:	Feature Engineering, Classification (Logistic Regression, Decision Trees, Gradient Boosting), Model Evaluation
Data Engineering:	ETL Pipelines, Data Cleaning, Data Validation, Data Transformation
Libraries:	Pandas, NumPy, Scikit-learn, XGBoost
Databases:	MySQL, Relational Databases
Tools:	Git, Jupyter Notebook, Power BI
Coursework:	Machine Learning, DBMS, Statistics, Data Structures and Algorithms

CERTIFICATIONS

- AWS Academy Data Engineering Badge

Dec 2025
- Wipro TalentNext Database Solutions Expert

Oct 2024
- HackerRank SQL – 5-Star (Gold) Badge
