SUMMARY

AI/ML Engineer (B.Tech, Artificial Intelligence & Data Science) with hands-on experience in **Python, machine learning, deep learning, GenAI, RAG, and FastAPI**, backed by a strong data foundation: SQL, ETL pipelines, and feature engineering on 500K+ records across banking, aviation, and academic domains. Experienced in building ML pipelines, comparing classification models, and exposing work through APIs, with a data-engineering internship that grounds models in clean, validated data.

EXPERIENCE

Data Analytics Intern — Decode Data Academy July 2025 – Present

- Built **ETL/data-preparation pipelines** in MySQL and SQL to ingest, clean, and standardize 10,000+ records across 5+ branches and 2 colleges, eliminating 95%+ of data errors, providing reliable inputs for analytics and ML use cases.
- Designed normalized relational databases, 10–15 SQL views, and 4–5 star-schema tables to support scalable, high-performance analytics.
- Integrated a Pentaho Spoon ETL layer into existing SQL workflows, improving data-processing efficiency by 20–30% and reducing manual effort.
- Delivered 6 Power BI dashboards (10+ KPI cards) using SQL and DAX to communicate data insights to non-technical stakeholders.
- Worked in a 6-member analytics team as the sole intern, translating stakeholder requirements into schemas, KPIs, and data-driven reporting.
- Validated data quality and business rules across 1,000+ records, a foundation for trustworthy model inputs.

PROJECTS

Loan Default Risk Prediction & Feature Engineering *(Self-Directed)* GitHub

Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

- Built an end-to-end **ML pipeline** on a 55K-row, 122-column loan dataset: missing-value and outlier handling, encoding, and model-ready data preparation.
- Engineered **10+ predictive features** (income segmentation, credit ratio, EMI burden, employment duration) to improve customer risk profiling.
- Trained and compared **Logistic Regression, Decision Tree, and Gradient Boosting** classifiers to predict loan default risk; evaluated with standard classification metrics.
- Translated model and EDA outputs into KPI visualizations on default patterns, repayment behavior, and credit affordability.

Flight Data Engineering Pipeline GitHub

Pentaho Spoon, MySQL, Power BI

- Built an end-to-end **data pipeline** (Pentaho Spoon, MySQL) processing 445K+ flight records into an analytics-ready fact table (455K rows → 6.5K, ~98% reduction), the kind of feature-ready data layer ML workloads depend on.
- Modeled star-schema tables and SQL views feeding 4 Power BI dashboards on airline delays, airport performance, and carrier efficiency.

EDUCATION

2022 - 2026 Bachelor of Technology (Artificial Intelligence and Data Science) at **Lakshmi Narain College of Technology, Bhopal, Madhya Pradesh, India**

TECHNICAL SKILLS

Programming:	Python, SQL, DAX
Machine Learning:	Supervised Learning, Classification (Logistic Regression, Decision Trees, Gradient Boosting), Feature Engineering, Model Evaluation, Predictive Modeling
Deep Learning & GenAI:	Deep Learning, Generative AI, LLMs, Retrieval-Augmented Generation (RAG)
APIs & Deployment:	FastAPI, REST APIs, Model Deployment
Libraries:	Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn
Data Engineering:	ETL Pipelines, Pentaho Spoon, Data Validation, Data Warehousing, Star Schema
Databases:	MySQL, Relational Databases
Tools:	Git, Jupyter Notebook, Power BI, Microsoft Excel
Coursework:	Machine Learning, DBMS, Statistics, Data Structures and Algorithms
